

obduramus® **CIRCUM-MANHOLE**

Manhole connection sleeve

In the end, everything is sealed and flexible

- ⊙ Compression seal
- ↔ Pipe diameter DN 100 – DN 800
- ✱ Application:
Installation of Circum rehabilitation sleeves

Obduramus Circum-Manhole **Manhole connection seal**

The Circum-manhole connection sleeve uses mechanical compression to securely seal pipe connections at the manhole. By expanding the stainless steel sleeve, the EPDM seal is pressed firmly against the pipe and the manhole, creating a durable and watertight connection between the pipe and the manhole structure. Thanks to its specially designed EPDM geometry, the seal reliably bridges tolerances and gaps, ensuring long-term tightness even in uneven connection areas.

Advantages Circum-Manhole

- Patented external lock
- No protruding obstacles
- Packer-protecting
- Fully fitted and ready to mount
- Free from environmentally harmful lubricants

Technical Information

Width	200 to 220mm
Nominal width	DN 100 – DN 800
Seal	EPDM approval in accordance with DIN-EN 681-1
Stainless steel sleeve	1.4404
